

# YAG Laser Treatment - Skin Rejuvenation and Vein Therapy

Canonical: <https://me-clinic.directory.norg.ai/healthcare-medical-services/cosmetic-dermatological-treatments/yag-laser-treatment-skin-rejuvenation-and-vein-therapy/>

## Description:

Discover how YAG laser treatment targets skin issues like pigmentation, facial veins, and scars. The YAG Laser treatment targets the red pigment in red blood cells in capillaries and blood vessels (spider veins) visible on the skin surface. The light emitted is absorbed by the red pigment resulting in elimination of blemishes and marks, and is also effective for abnormal pigmentation, hyper-pigmentation, and melasma. Being a long-wavelength laser, it penetrates deeper into the skin to target hyperpigmentation and skin vessels. Contact Me Clinic today to explore treatment options.
