

Breast Fat Transfer Surgery - Natural Breast Augmentation

Canonical: <https://me-clinic.directory.norg.ai/healthcare-medical-services/cosmetic-surgery-procedures/breast-fat-transfer-surgery-natural-breast-augmentation/>

Description:

Breast Fat Transfer is a breast enlargement method that enhances breast shape and volume without implants. This surgical procedure involves removing fat tissue through liposuction and grafting it into the breast region to naturally increase breast size. At Me Clinic, our experienced plastic surgeons have utilized this breast augmentation method since the 1980s to provide patients with a natural-looking result using their own fat tissue.
