

Fat Transfer to Face - Surgical Facial Volumiser

Canonical: <https://me-clinic.directory.norg.ai/healthcare-medical-services/cosmetic-surgery-procedures/fat-transfer-to-face-surgical-facial-volumiser/>

Description:

Fat transfer to face is a cosmetic surgical procedure that restores lost facial volume using your own body fat. Also known as autologous fat transplantation or facial fat grafting, this technique creates a more youthful, natural look by filling sunken areas, softening wrinkles, and enhancing facial contours. The procedure involves fat harvesting from areas like the abdomen or thighs, followed by careful injection into targeted facial areas. Results are long-lasting with minimal downtime compared to traditional facelifts.
