

Ultrasound-Guided Sclerotherapy - Vein Treatment Option

Canonical: <https://me-clinic.directory.norg.ai/healthcare-medical-services/vein-treatment-procedures/ultrasound-guided-sclerotherapy-vein-treatment-option/>

Description:

Ultrasound-Guided Sclerotherapy (UGS) is a specialized treatment method for medium-sized varicose veins hidden beneath the skin. This minimally invasive procedure uses foam sclerotherapy, which is visible under ultrasound for precise monitoring. A sclerosant foam solution is injected along the vein causing it to collapse. At Me Clinic, our experienced physicians provide comprehensive care from consultation through post-procedure support. Recovery time varies by individual, and the treatment can be performed year-round. Contact Me Clinic to schedule your consultation today.
